INTRODUCTION

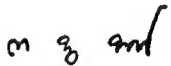

'Statistical Abstract 1970', is the thirteenth number in the being brought out annually by the Directorate of Economics and Statistics Rajasthan since 1958

The statistical tables presented in this publication relate calendar year 1970 or the financial/agricultural/co-operative year 1970 except where otherwise indicated. Keeping in line with the past pattern in a series of five years has been given for the State, with district wise details for the last available year.

In this issue, few new tables have been added and presentation of other tables has been improved, linkage with the series already published in the past has, however, been kept in view.

We are grateful to the various departments and agencies for supplying data for this publication.

Constructive suggestions for making the publication more useful would be welcome.

PRICES

Workers Price Index Numbers for Working Classes (Beawar)—These indices relate only to working class workers of Beawar. These represent change in the cost of a given basket of goods and services consumed by an average working class household. The items in the list of articles are grouped under five heads viz, food fuel and lighting, clothing, bedding and footwear, house rent and miscellaneous and separate indices are worked out for individual groups. These are worked out and supplied by the Director Labour Bureau, Government of India. The prices of certain prescribed commodities for this purpose are collected by the Labour Bureau Simla or this centre of Rajasthan through the agency of this Directorate.

Index Numbers of Wholesale Prices in Rajasthan—The Directorate of Economics and Statistics compiles index number of wholesale prices for measuring the variations in the price level in the State. It is a general purpose index with the year 1925-26 as base. The index is divided into four major groups viz, food articles, fuel, power and lubricants, industrial raw materials and manufactured articles. In all it covers 59 items for which 98 quotations are collected from 22 centres in the State on every Friday.

Farm Harvest Prices—The farm harvest price is the average wholesale price at which the commodity is sold by the producer to the trader at the village site during the harvest period. The average farm price of a commodity for the State as a whole is arrived at by the method of weighted average with the district production figures for the current year as weights.

New Series of Consumers Price Index Numbers for Jaipur and Ajmer centre—

Jaipur and Ajmer were among the 50 centres selected for conducting fresh Family Living Surveys among industrial workers under the Government of India's scheme during the Second Five Year Plan. Accordingly Family Living Surveys were conducted by the Labour Bureau, Government of India Simla at these two centres during the period September, 1958 to August 1959 in the course of which data were collected from 349 families for Ajmer centre and 239 families for Jaipur centre. Both single member families and multi member families were covered in the course of survey and an average budget giving a combined expenditure pattern of both types of families was tabulated.

Weighting Diagram—On the basis of expenditure of above families an average budget for each centre was prepared. The weights to various commodities/sub group/group being their respective share of expenditure in an average budget. The following items of non consumption expenditure and non priceable expenditure were excluded from the average budget.

- (a) All items under the sub group 'Subscription etc'
- (b) All items under the sub group 'Taxes'
- (c) All items under the sub group 'Interest, Litigation and Permittances'
- (d) All items under the sub-group 'Savings and Investments', and
- (e) Debts Repaid

The rest of the items in the average budget have been classified in the various sub-group and groups. Suitable

ations were also done for the unpriced items and those having insignificant expenditure. The weighting diagram with the centres is given below —

Group	Weights	
	Jajpur	Ajmer
I Food	40	273
II Tobacco, Pan, Supari and Intoxicants	88	419
III Fuel and light	126	45
IV House Rent	632	491
V Clothing, Bedding and Footwear	1246	1217
VI Miscellaneous	1546	1949
Total	10000	10000

A special feature of the series is the varying monthly weights for the components of sub-group I, Fruits and Vegetables, which has a highly seasonal character and introduction of half yearly varying index for House Rent.

Base year—Calendar year 1960 has been taken as the base period. For each month a pooled average of all the quotations from all the four markets in each centre has been taken as the average monthly price. A simple average of monthly average prices for 1960 has been taken as the base price for each item.

Collection of prices—Price Collection work at each centre is being done by four price collectors under the supervision of the District Statistician at the respective centres. The localities selected for price collection at the two centres are as follows —

Jajpur Centre

- 1 Chandpole
- 2 Joluri Bazar
- 3 Ramganj
- 4 Station Road

Ajmer Centre

- 1 Khasarganj
- 2 Nagra
- 3 Ramganj
- 4 Srinagar

Prices for each item for which detailed specifications to have been given are collected weekly on every Monday at Ajmer and on Friday at Jajpur from selected shops. The price returns are subjected to a close scrutiny at both the Bureaux. Simla and the Directorate of Economics and Statistics, Patna, before the price quotations are used for preparation of Consumer Price Index Numbers.

Method of computation—The Index for each centre has been calculated by Laspeyres formula as a weighted average of price relatives, the weights being proportion of expenditure as determined from the Family Living Survey. Price relatives for the items for a current month are obtained by expressing the average monthly price of an item for the current month as a percentage of the corresponding base price. In case where more than one variety are being priced for an item the price relative is calculated separately for each variety and then a simple average of these price relatives is taken to be the price relative of that item.

The price relative of each item is multiplied by its weight in the sub-group, then the sum of the products for all items in a sub-group/group is divided by the sum of the weights of the items as 100 and the resultant figure is the sub-group/group index. The sub-group index numbers in the Food and Miscellaneous groups are multiplied by their respective sub-group weights and the sum of the products when divided by the sum of the weights yields the Food and Miscellaneous Group Index respectively. For determining the general consumer price index numbers for a month the group index numbers are again multiplied by the total weight of the different groups and the total product is divided by the sum of the group weights.

The group wise and general indices from 1961 to 1969 and monthly indices for 1969 for both Ajmer and Jajpur centres have been given in the Tables 104 and 105 respectively.
